

RobZone®

DUORO® X-GO

Welcome to the Robzone Robot mobile app.

Sign up, pair your DUORO X-GO PROFI robotic vacuum cleaner with the app and conveniently control it from anywhere.

To control the robot vacuum cleaner via the app, the robot must always be fully charged and in „ready“ mode.

Note: The mobile app works exclusively with 2.4 GHz Wi-Fi and does not support 5 GHz networks.

Download the app
Robzone Robot
to your mobile device.

DUORO X-GO HOMEVAC

The sweeping robot needs to understand your home layout. In the case of sufficient power, please let your sweeper start from the charging stand and clean the ground debris, start to build the map and perform the first cleaning. Please follow the machine for the first creation, but do not Block the machine's walking path, and please help the machine if it gets stuck.

Start Drawing

Skip

If your household is ready to load the map, you can start it. The robot will quickly map the entire space and you can then edit the map or name individual rooms as you wish.

Part 5:

LOADING AND EDITING
THE MAP

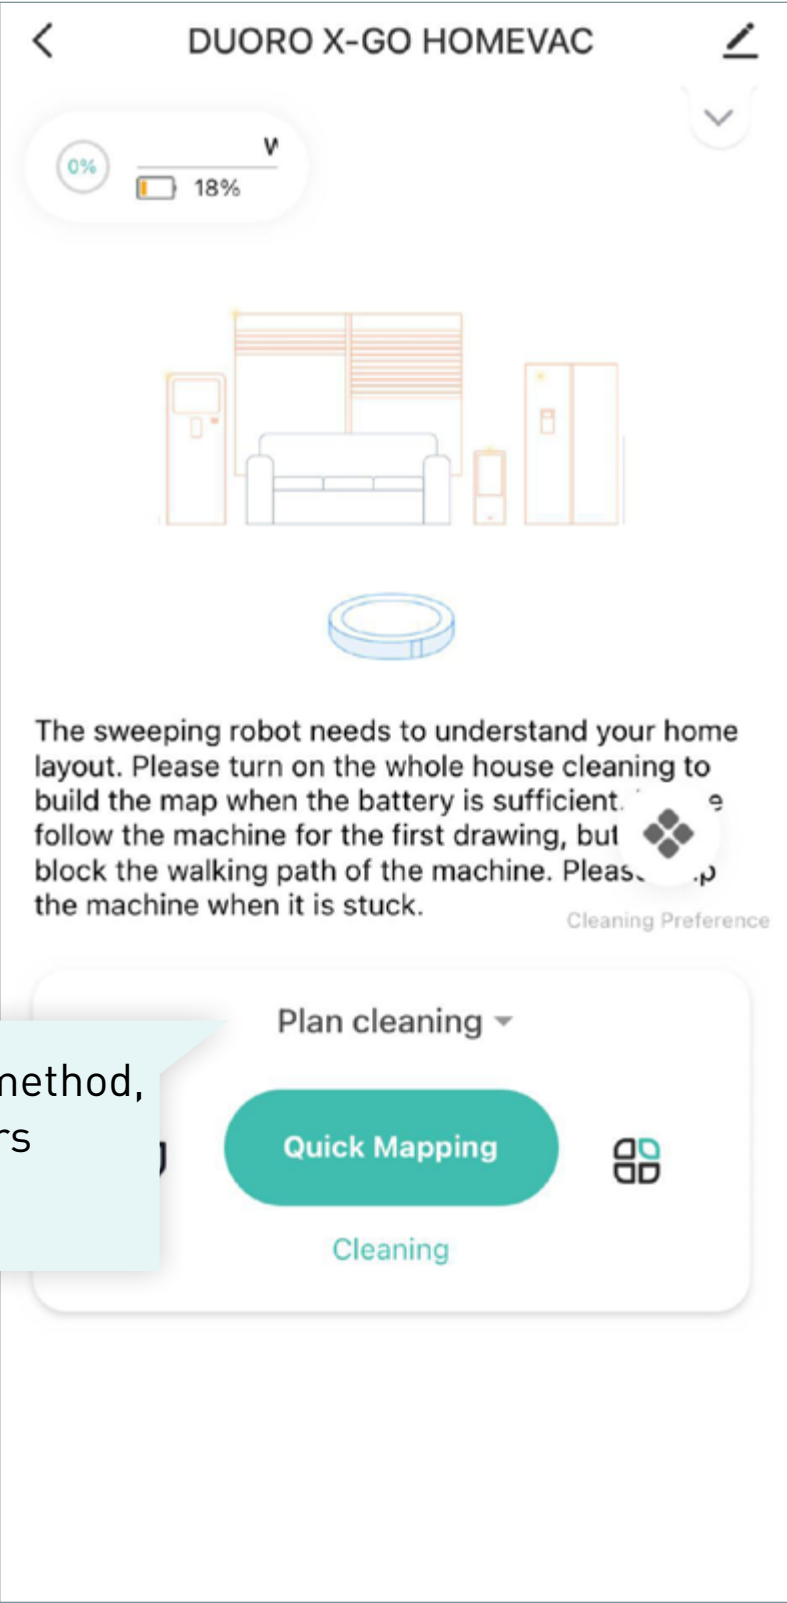

LOADING FIRST HOUSEHOLD MAPS >>

Before the first cleaning, the robotic vacuum cleaner performs a quick load of the complete household map.

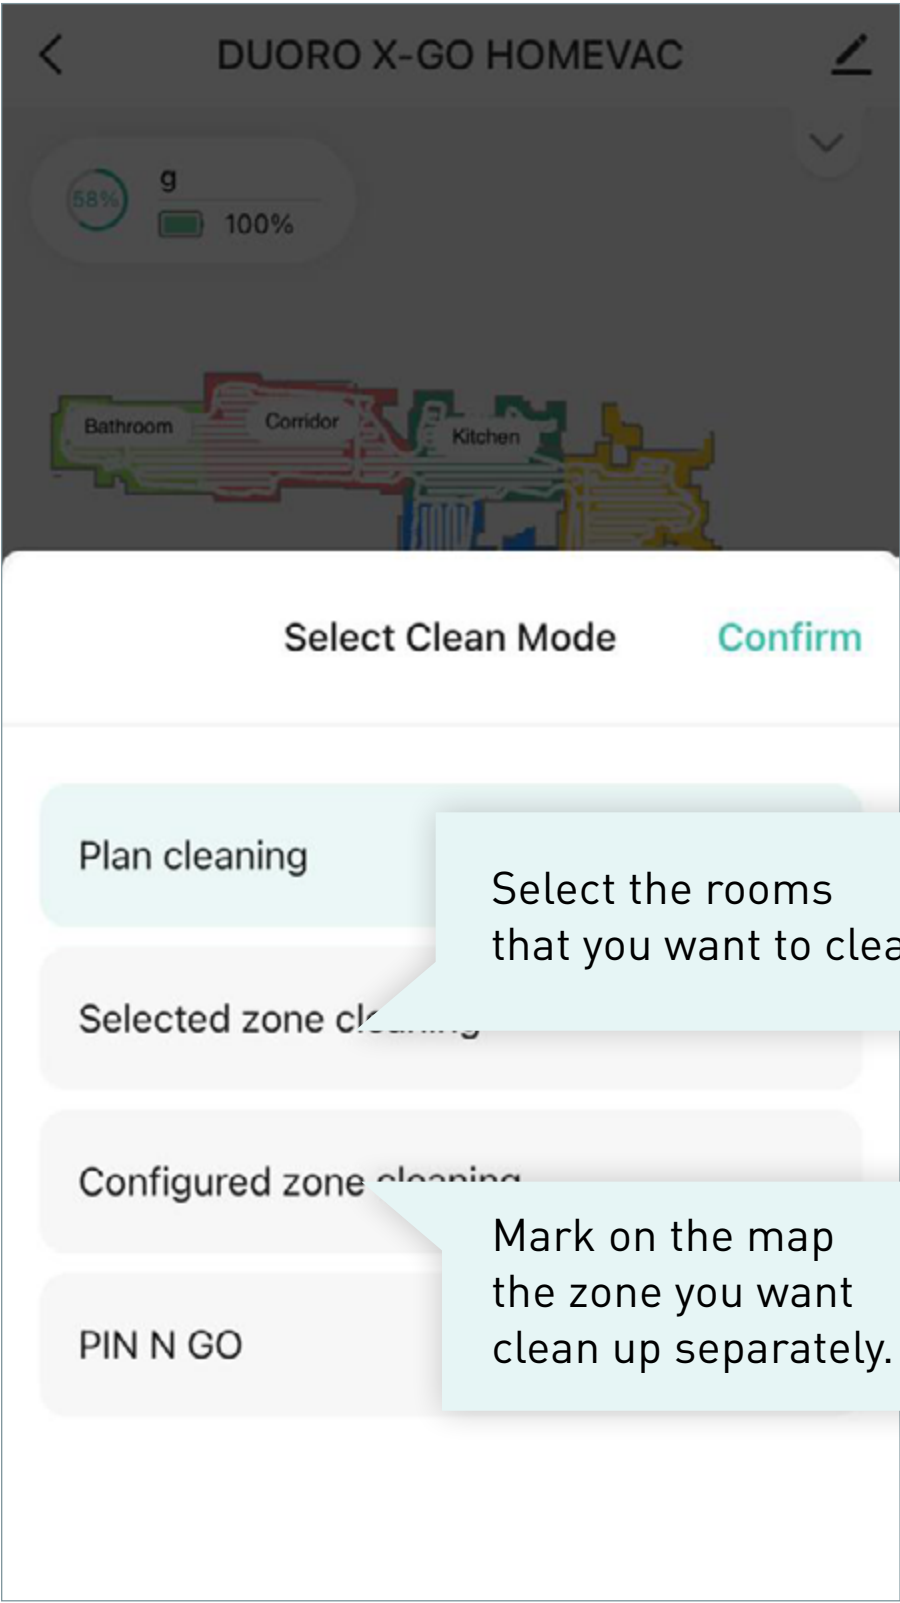

Prepare the space so that the robot has as few obstacles in its path as possible. Give it access to all the rooms you want to clean later.

Wait for it to finish loading.

Do not stop or interrupt the robot while it is working. Otherwise, the map may not load correctly and the whole process will have to be repeated. If the map loading is interrupted, return the robot to the station and start the map loading again.

Choose a cleaning method, which you want yours to clean the house.

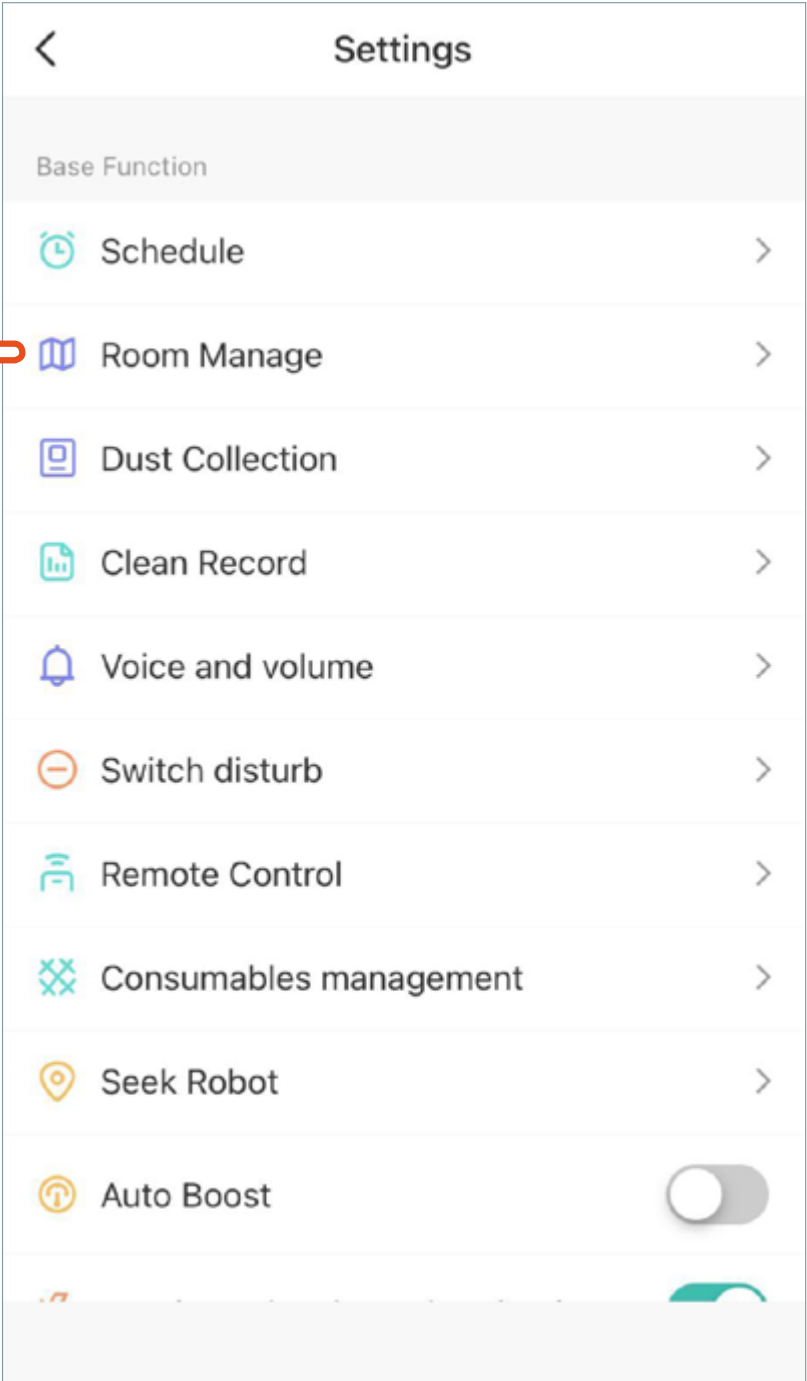

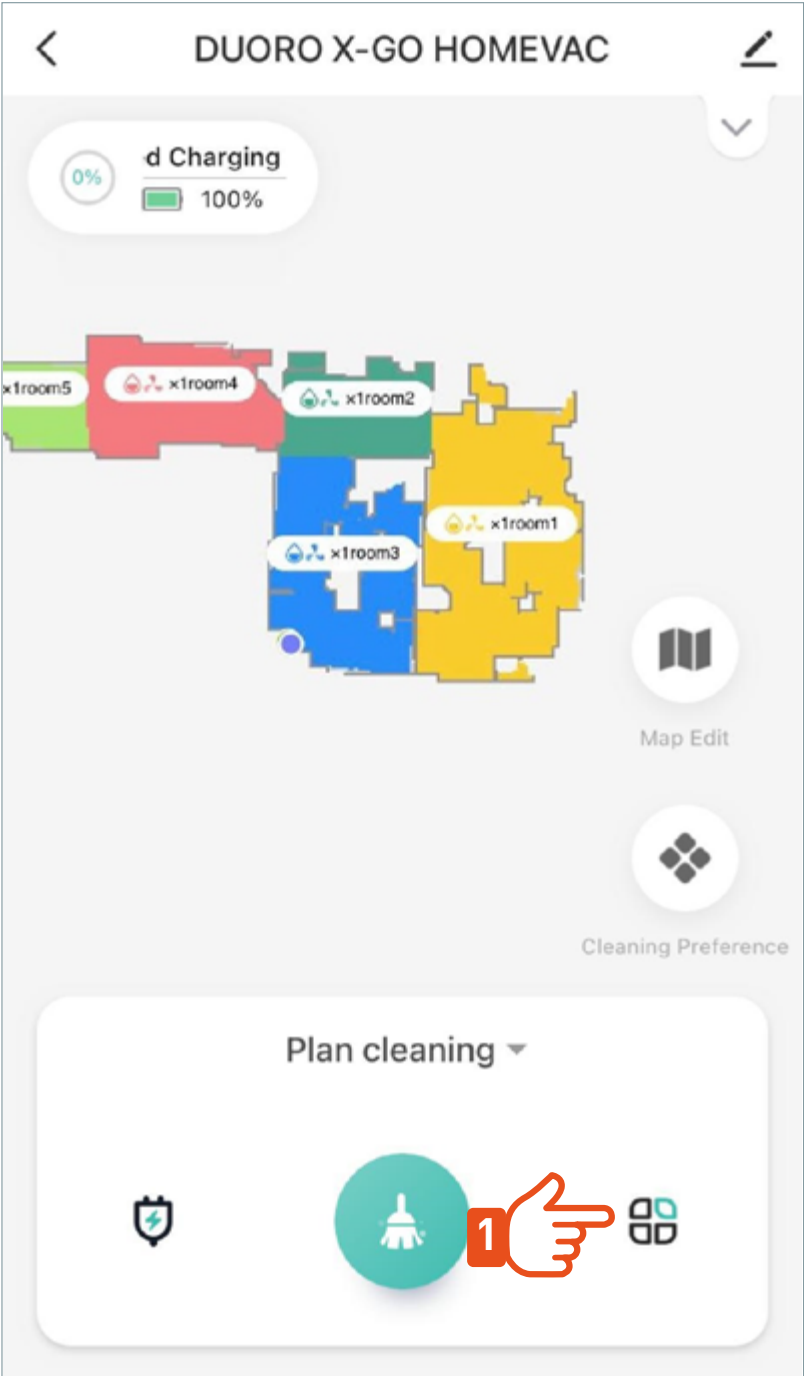

Select the rooms that you want to clean.

Mark on the map the zone you want clean up separately.

OTHER SETTINGS >>

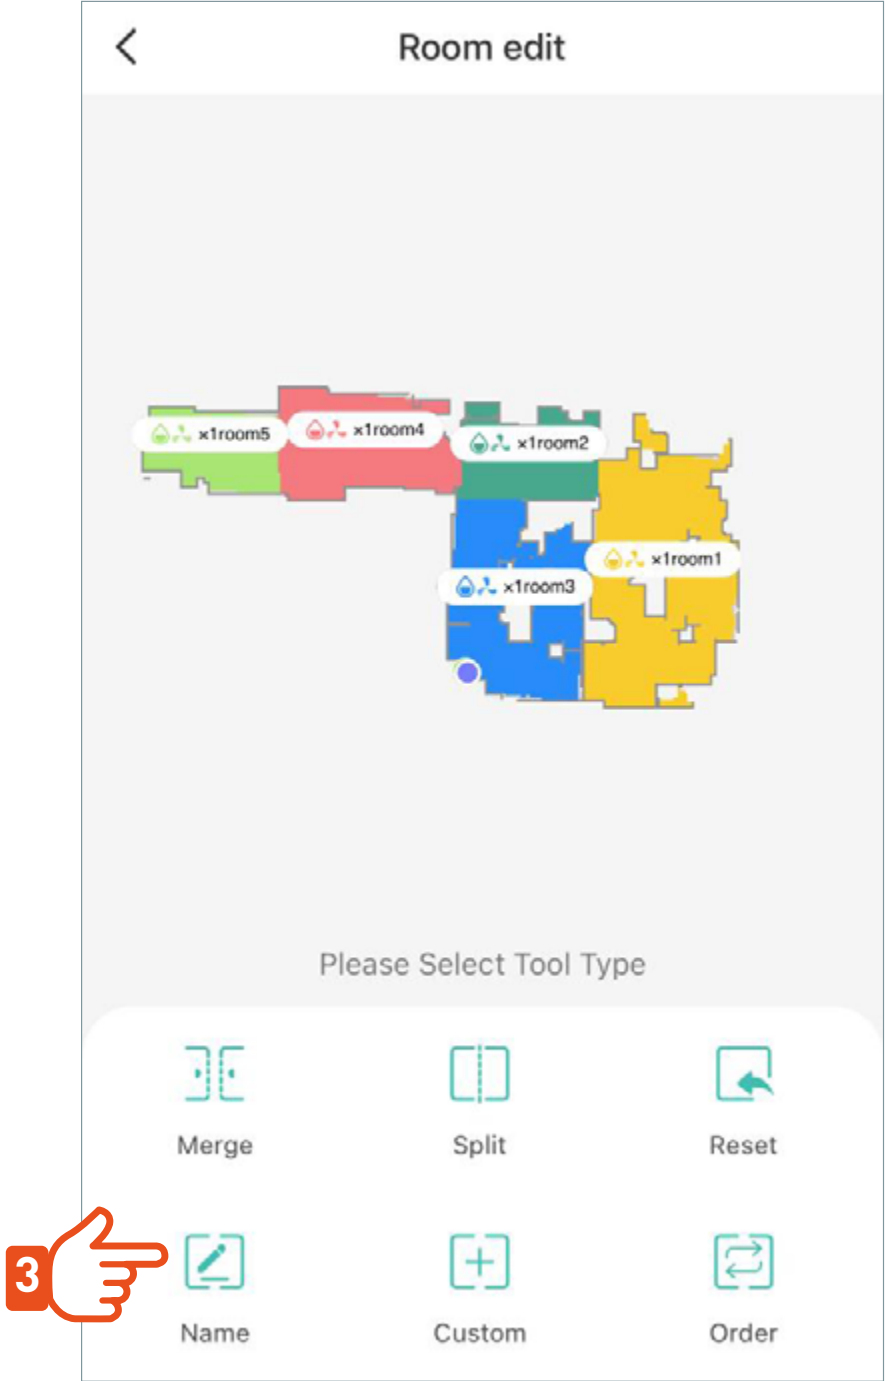

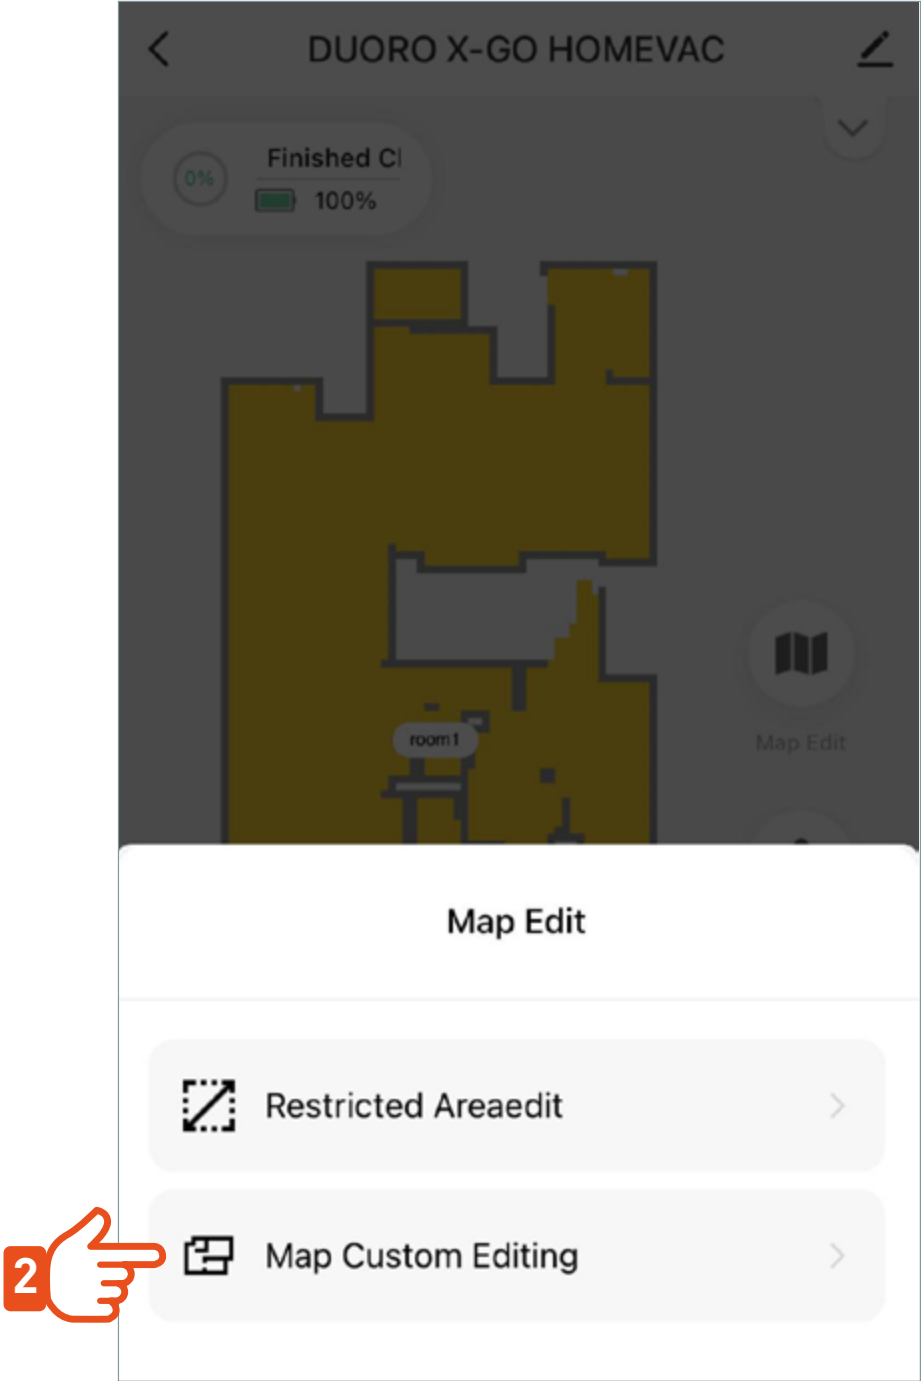

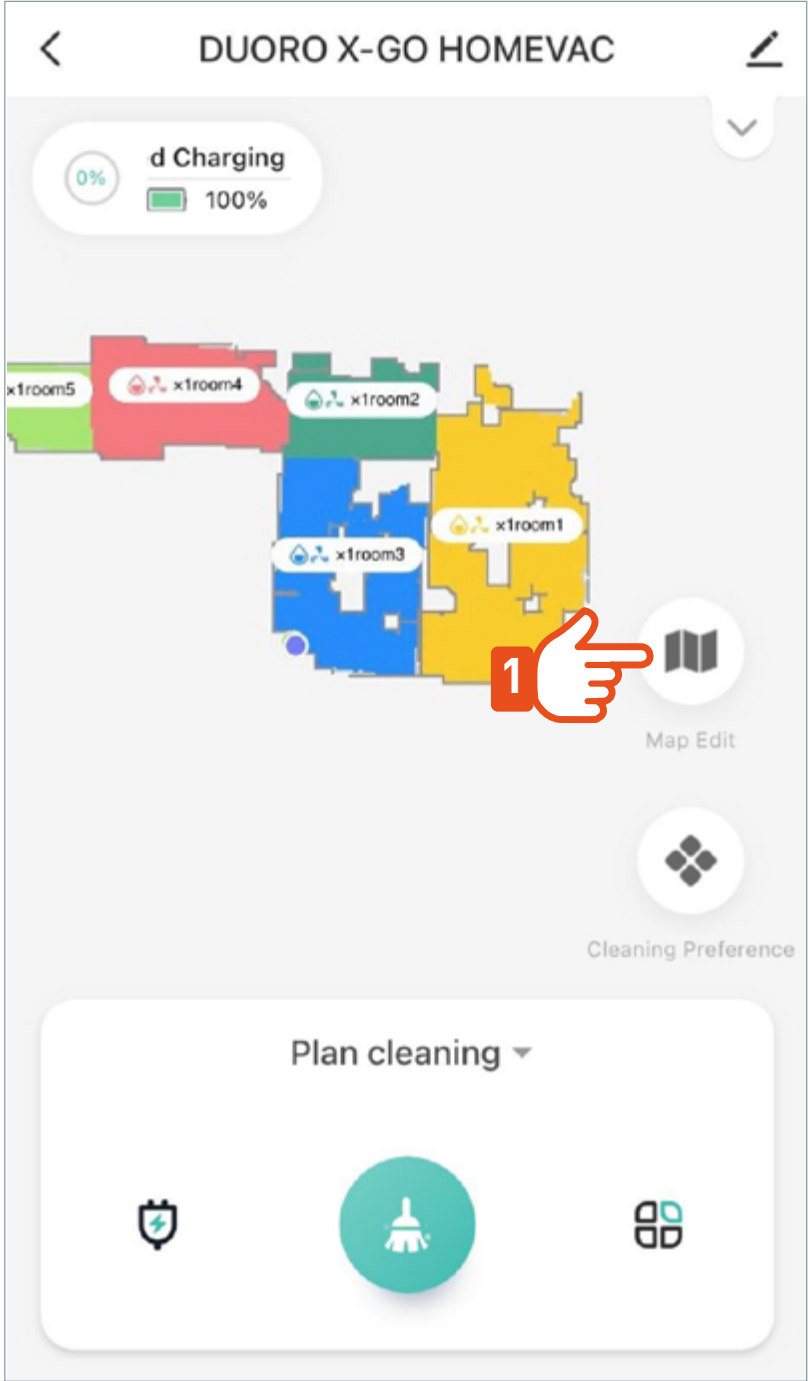

Save or search the loaded map.

If this map covers the cleaning needs of the entire household, there is no need to load any other maps and the robot will automatically work with this map for subsequent cleanings as well.

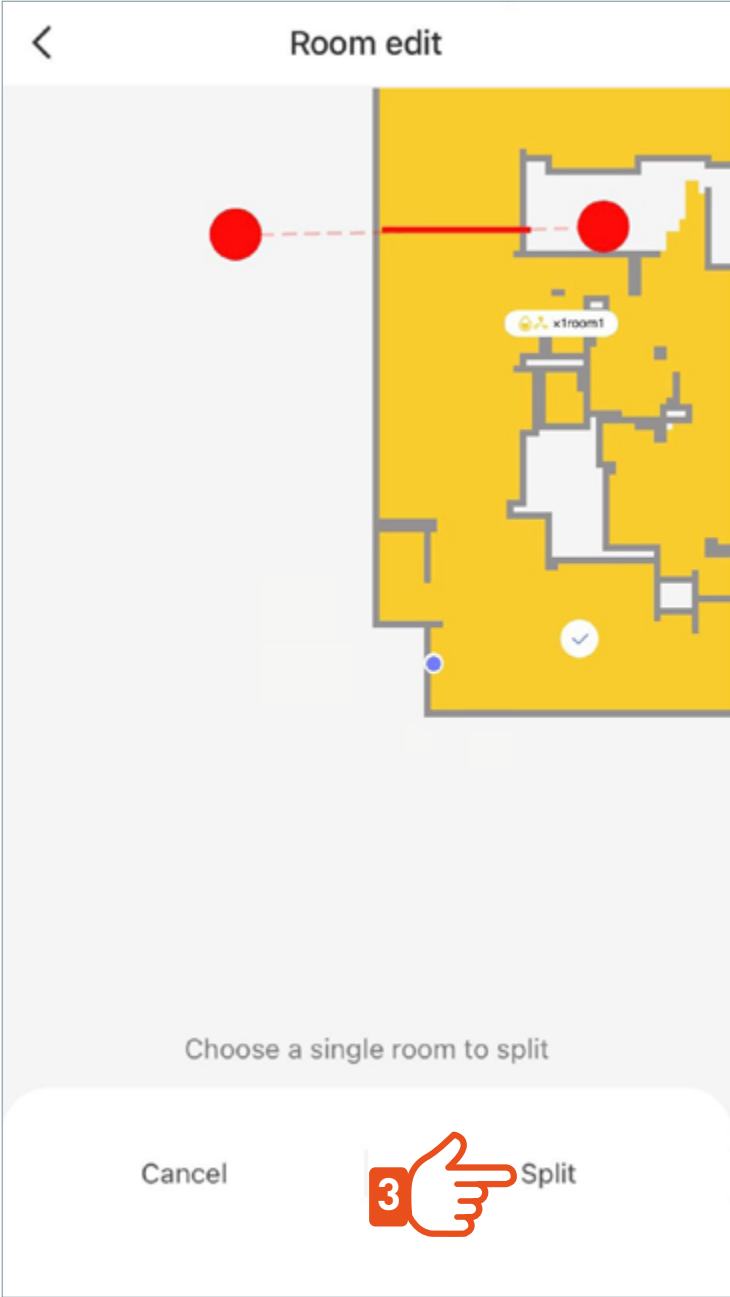

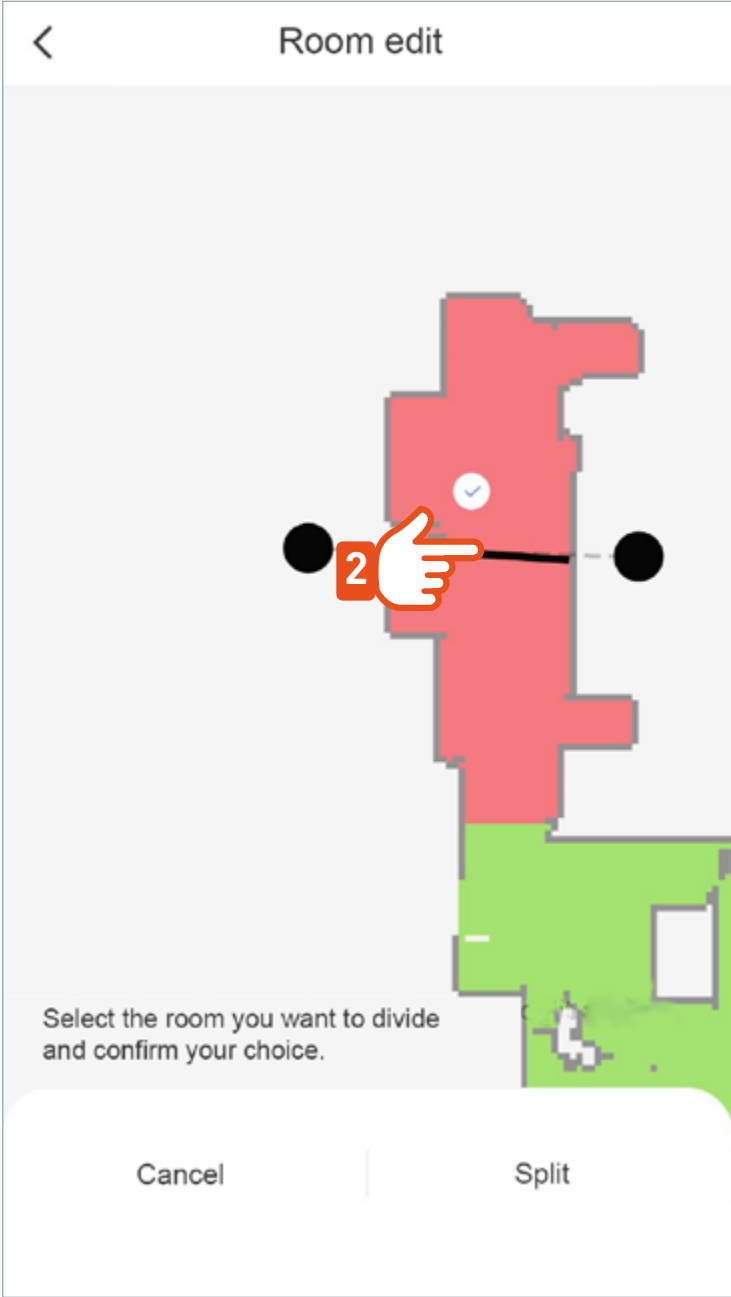

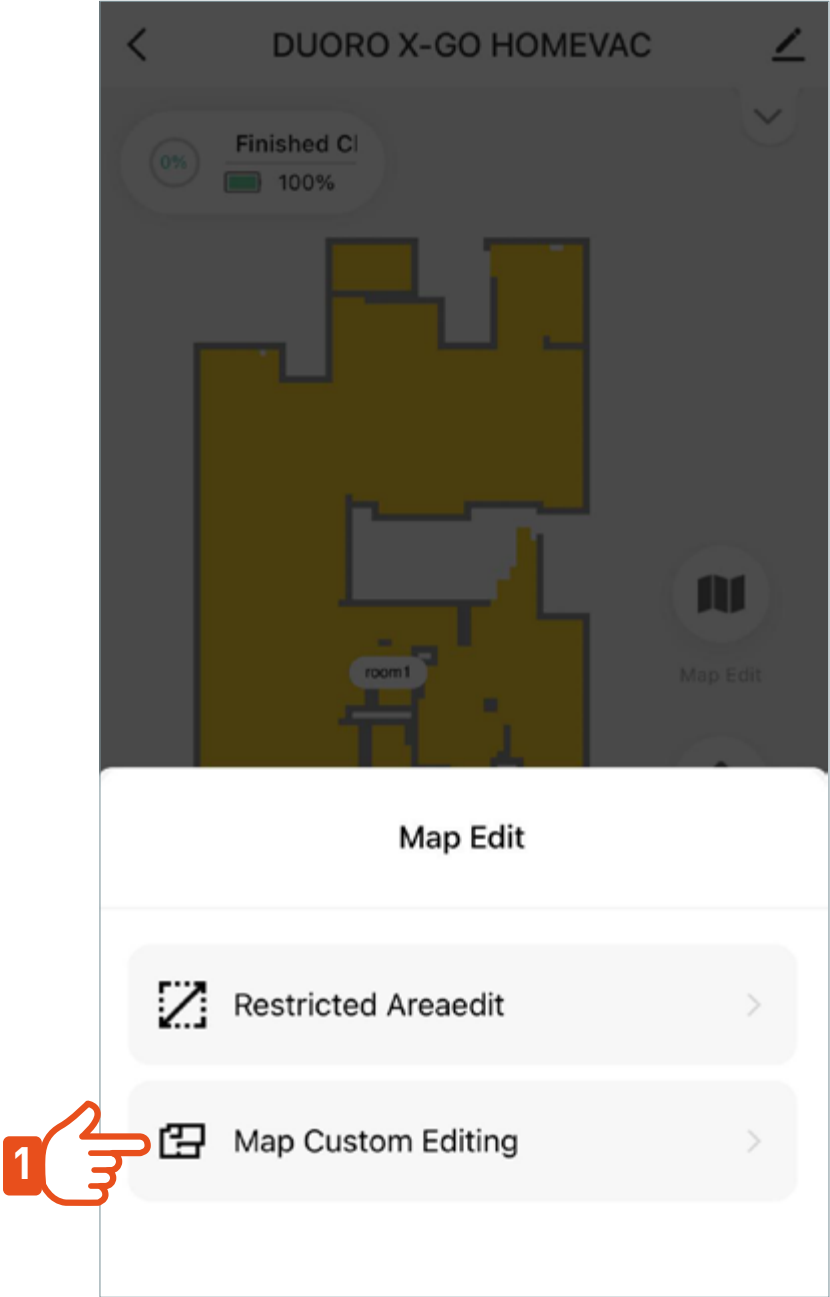

EDIT MAP >>

Name the map.

EDIT MAP >>

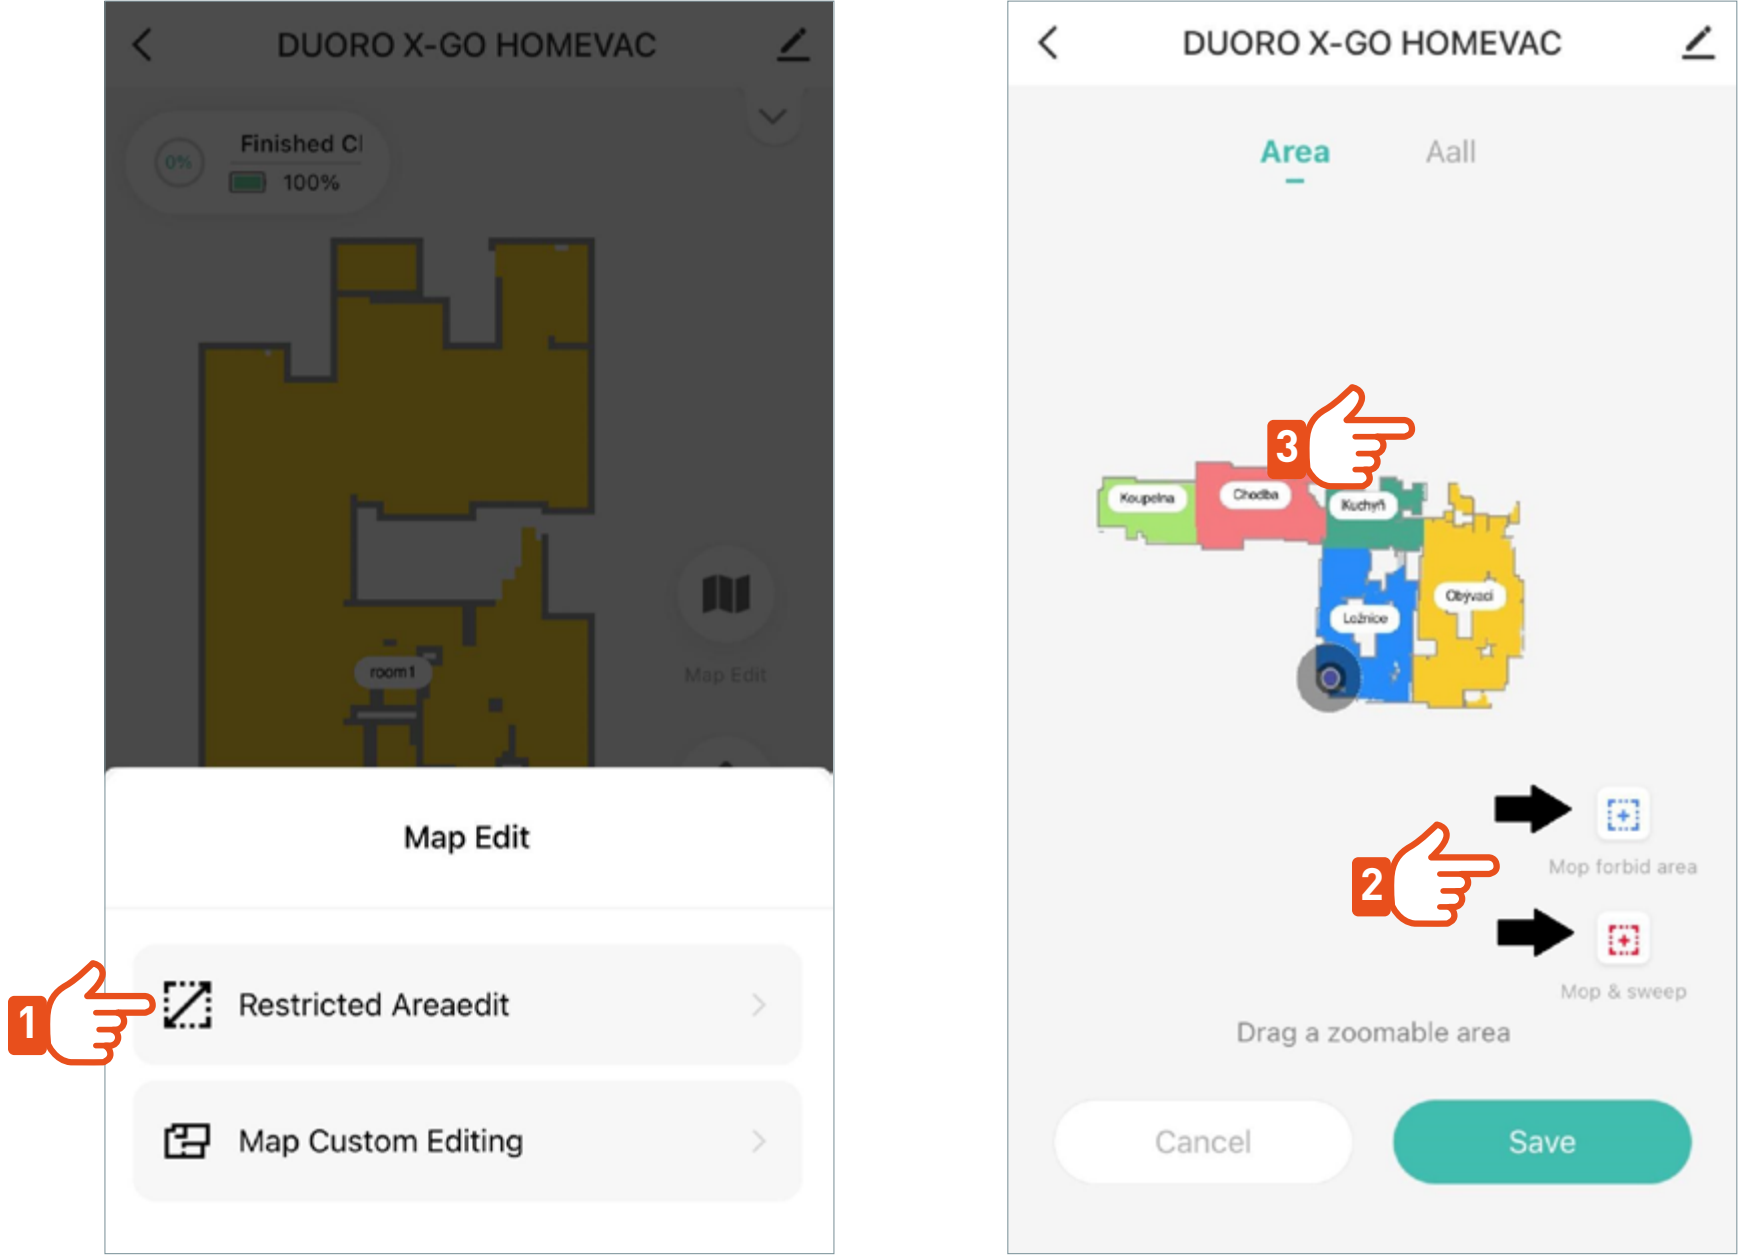

Divise / merge the rooms.
You refine the map by merging or layout of the room according to reality.

EDIT MAP >>

NO-GO Zones

Place forbidden zones or virtual walls on the map where you don't want the robot to clean.

Always remember to save all changes to the map.
The robot will remember the map modified in this way and will work with it permanently.

Part 6:

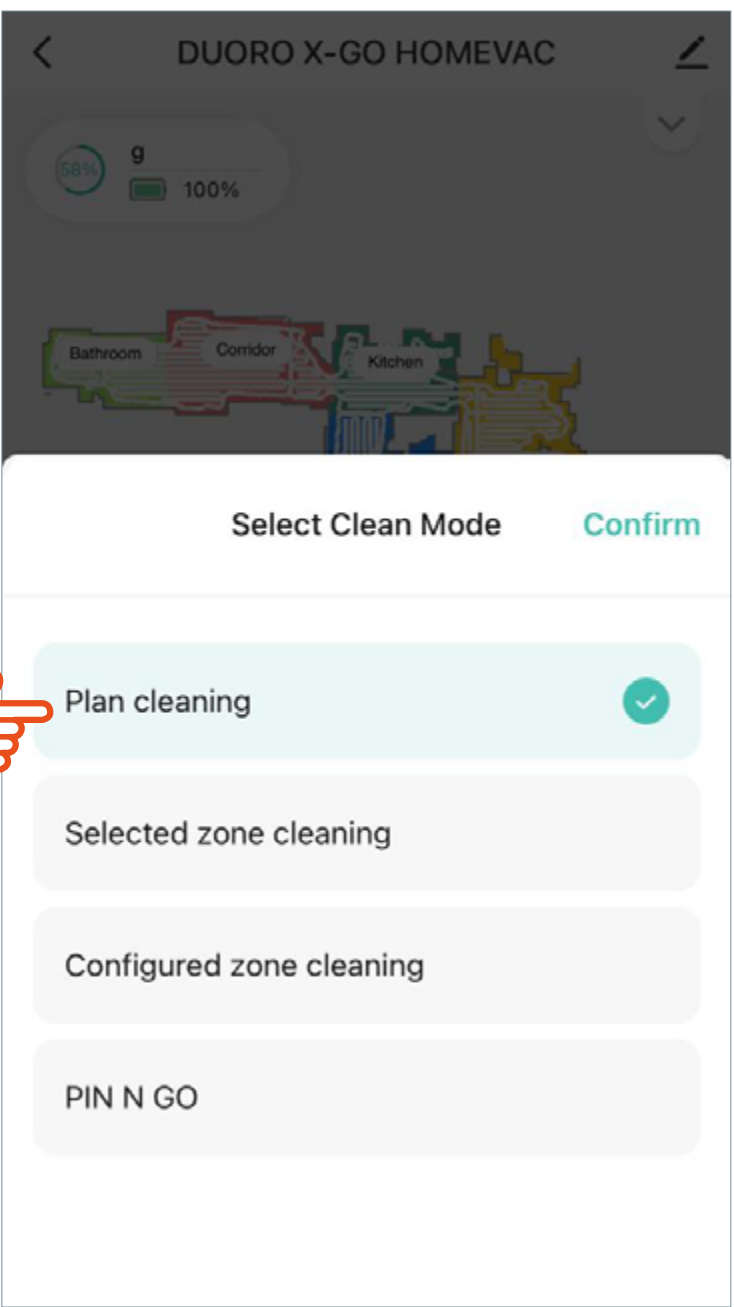

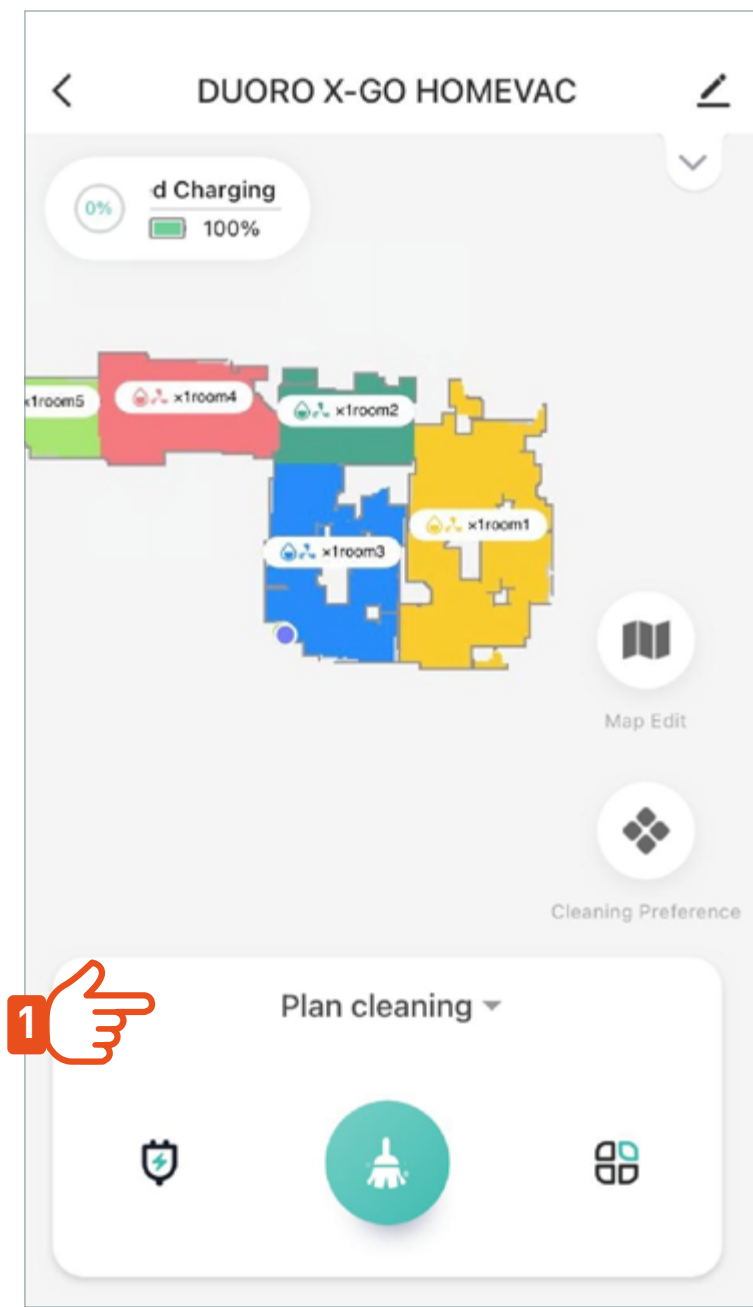

**FUNCTIONS
AND CONTROLS**

CLEANING MODES AND PROGRAMS >>

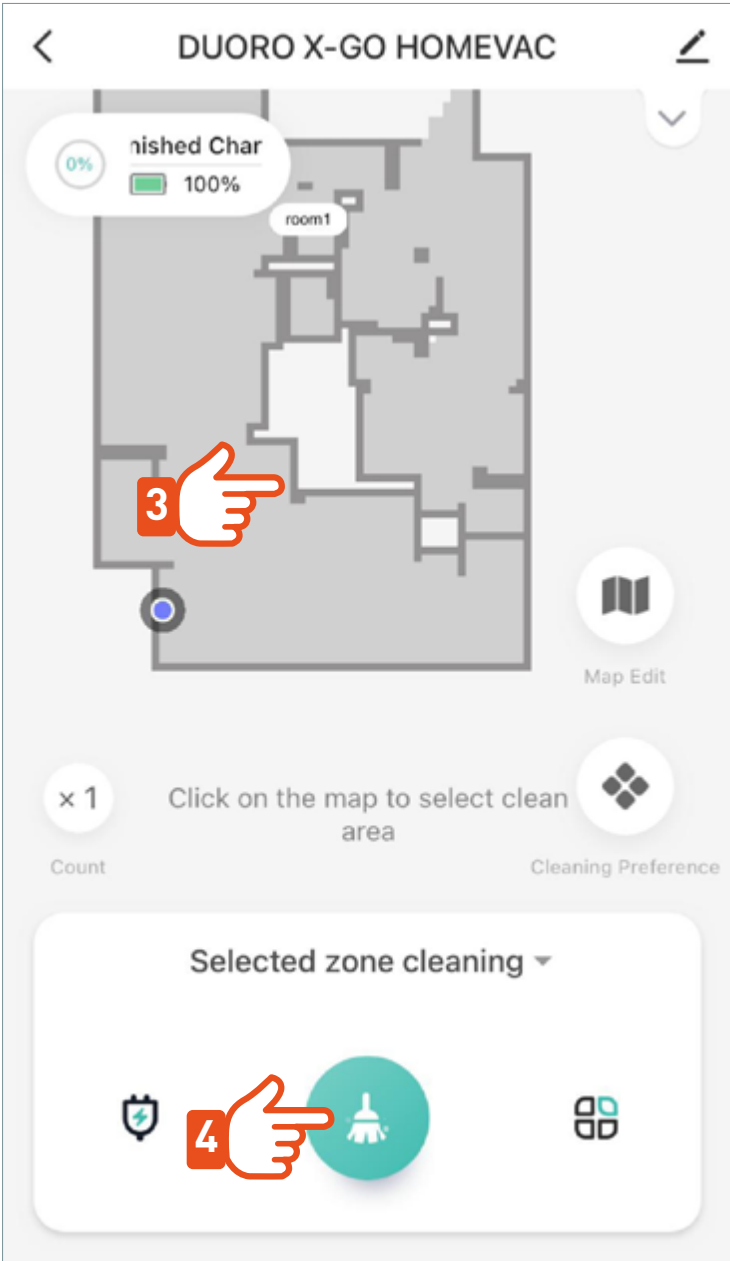

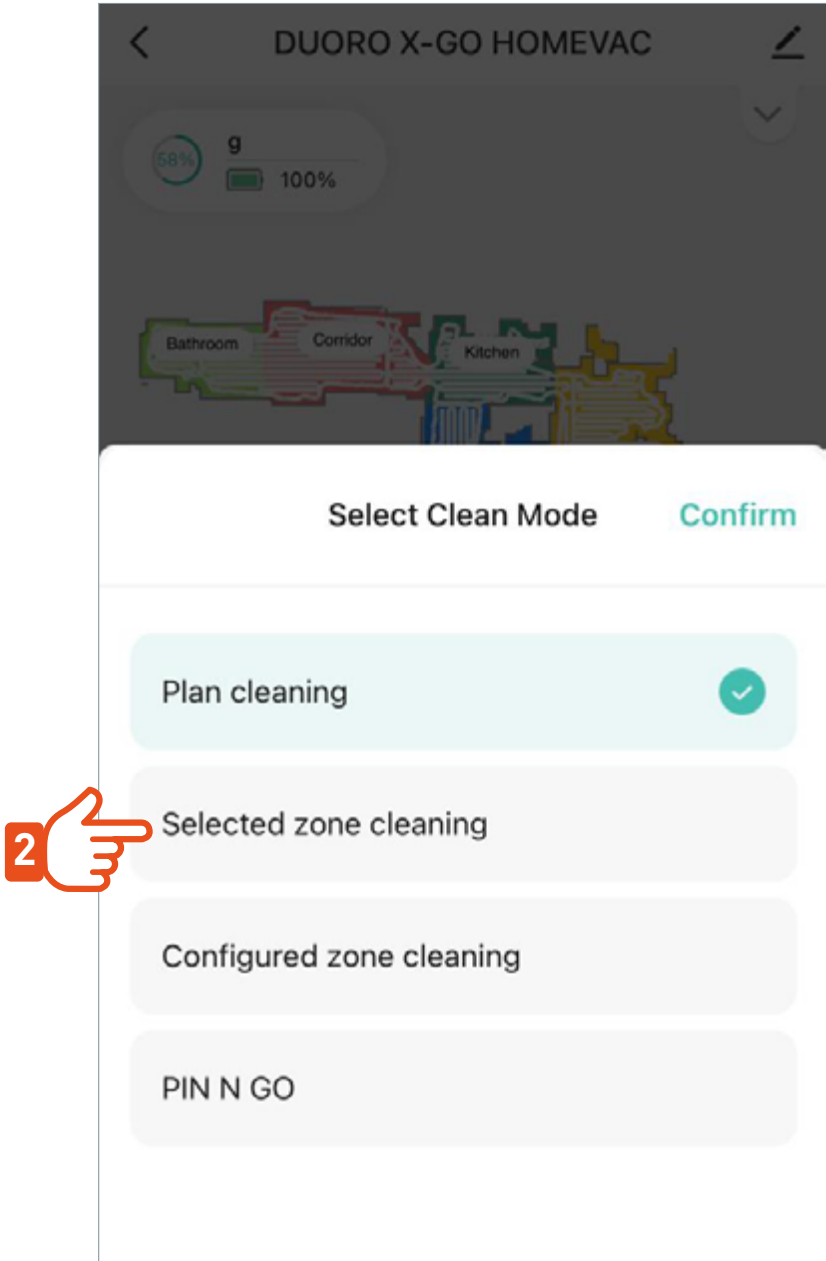

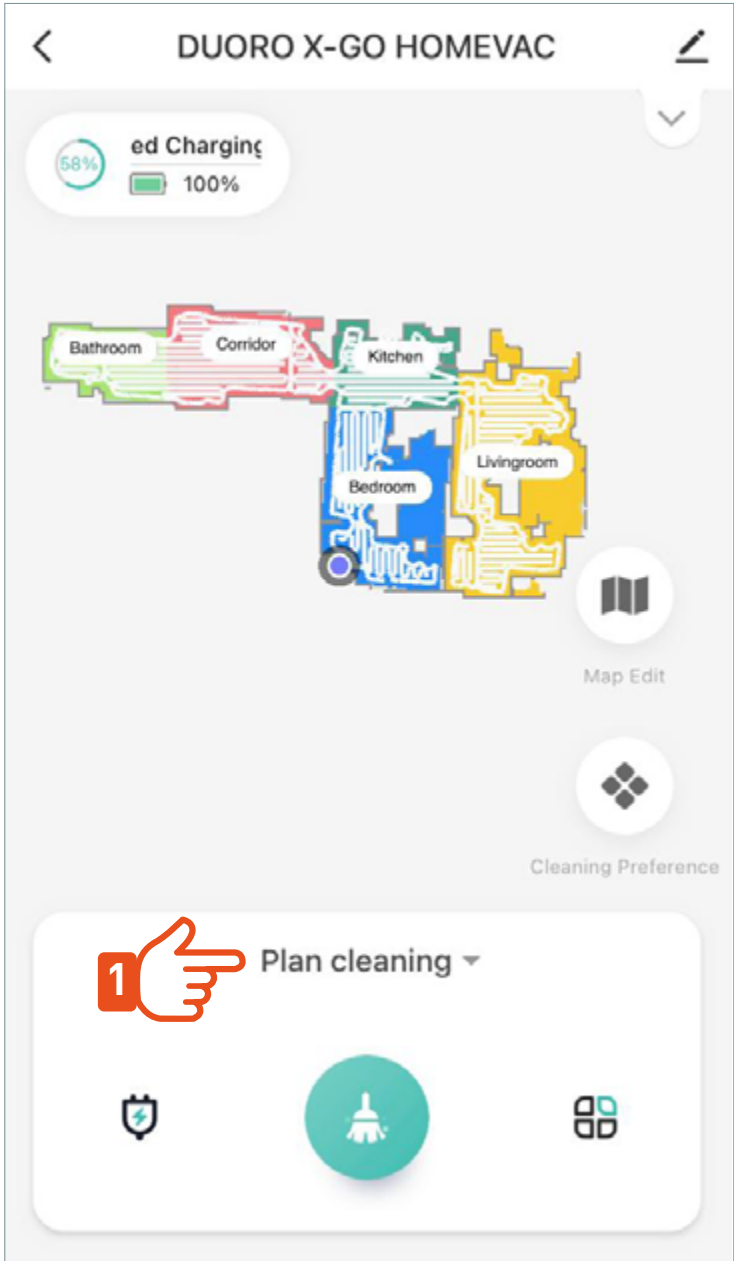

TYPES OF CLEANING >>

Choose the type of cleaning you prefer.

CLEANING OF SELECTED ROOMS >>

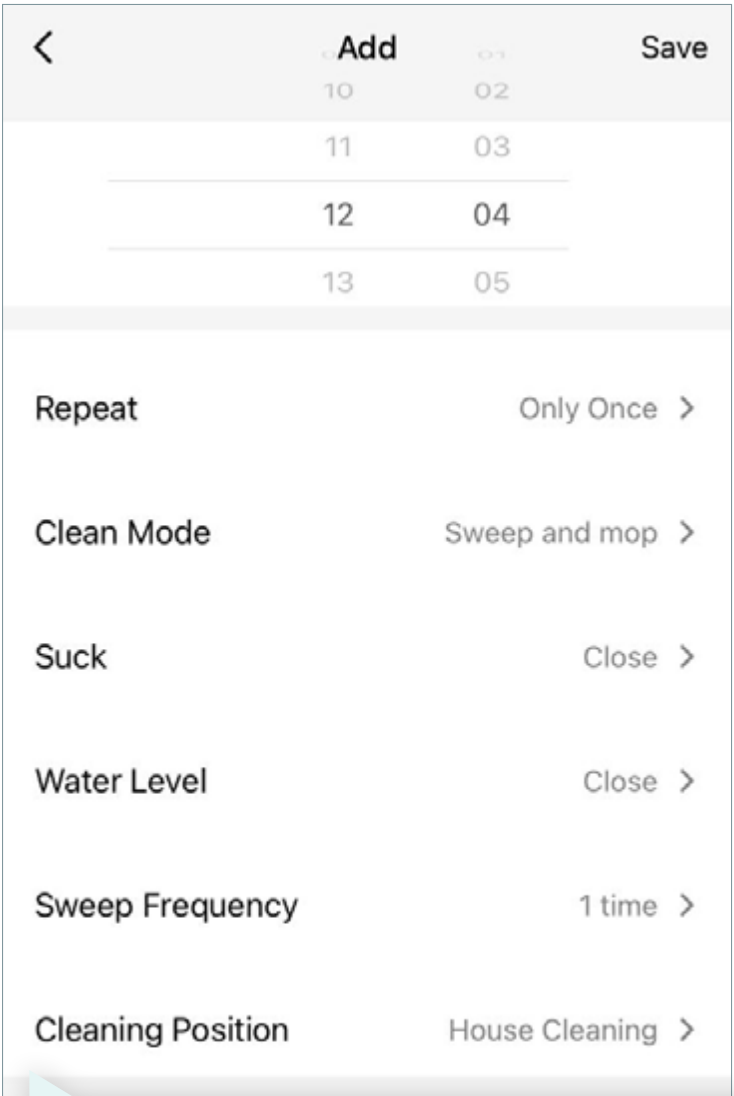

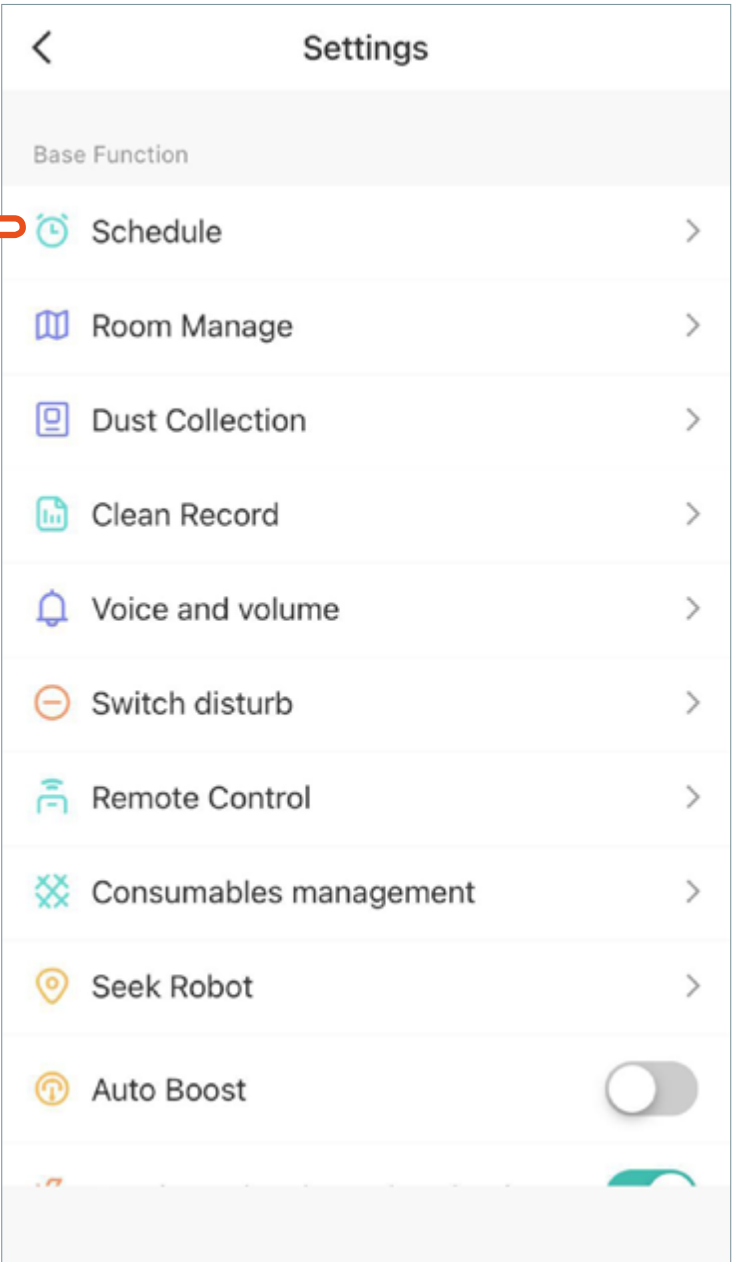

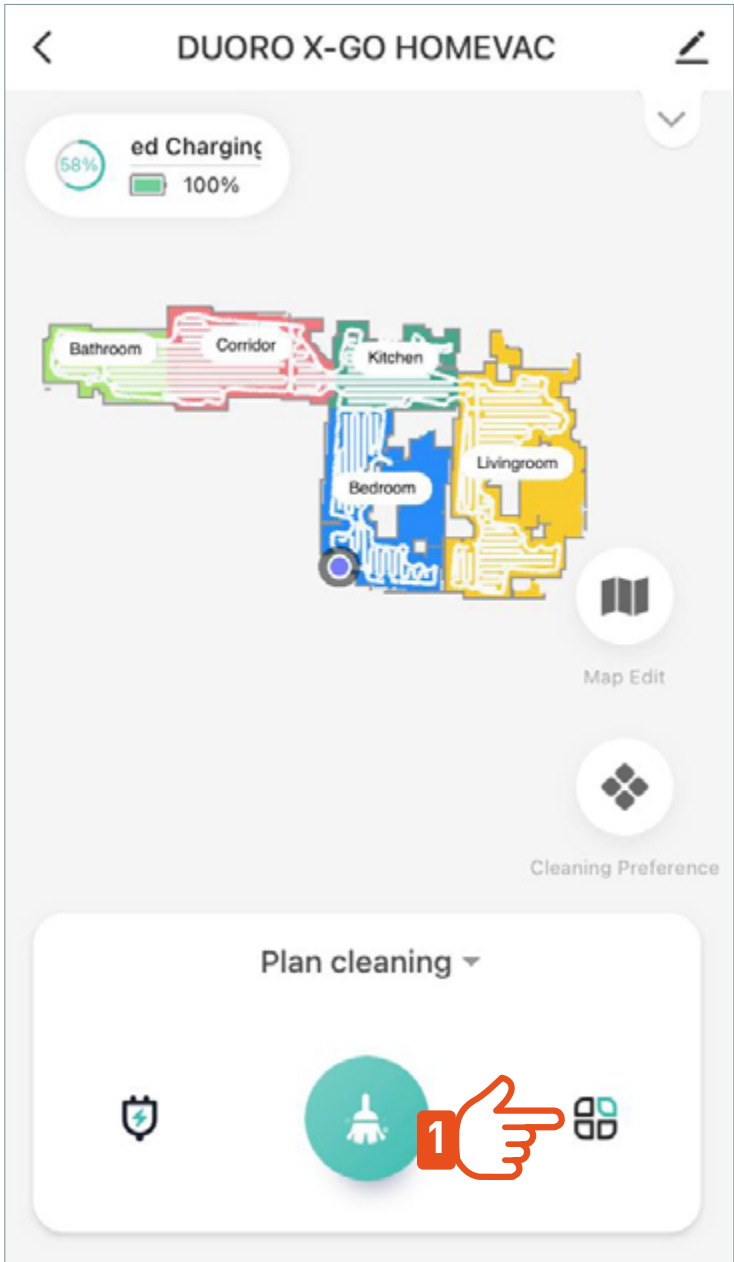

For immediate cleaning of selected rooms, mark the rooms you want to clean on the map. Cleaning can begin immediately after setting up.

After finishing cleaning the selected room, the robot will return to the charging base/station.

SCHEDULED CLEANING >>

After setting the scheduled cleaning, the robot will automatically start cleaning the entire floor or selected room at the programmed time and day. You can set the cleaning method for each room and time separately.

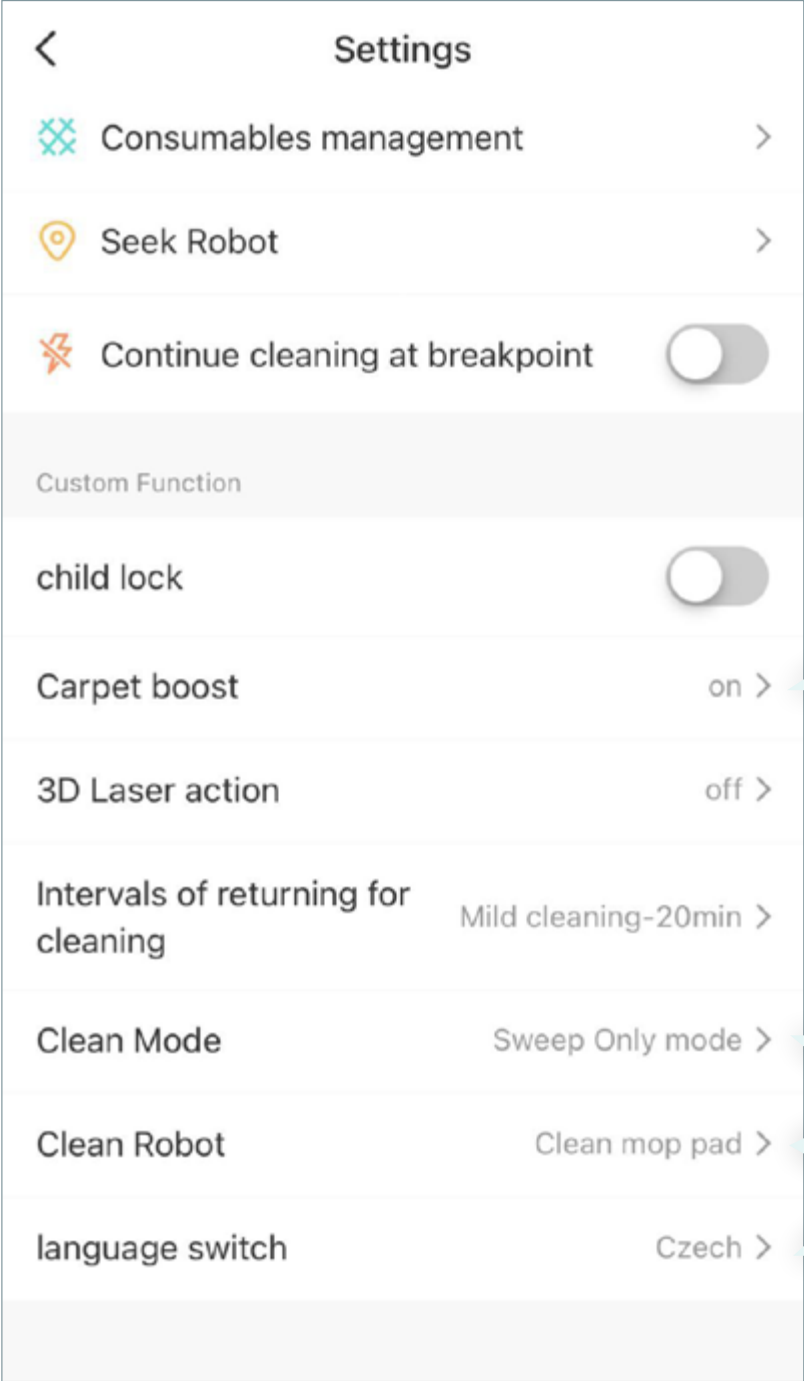

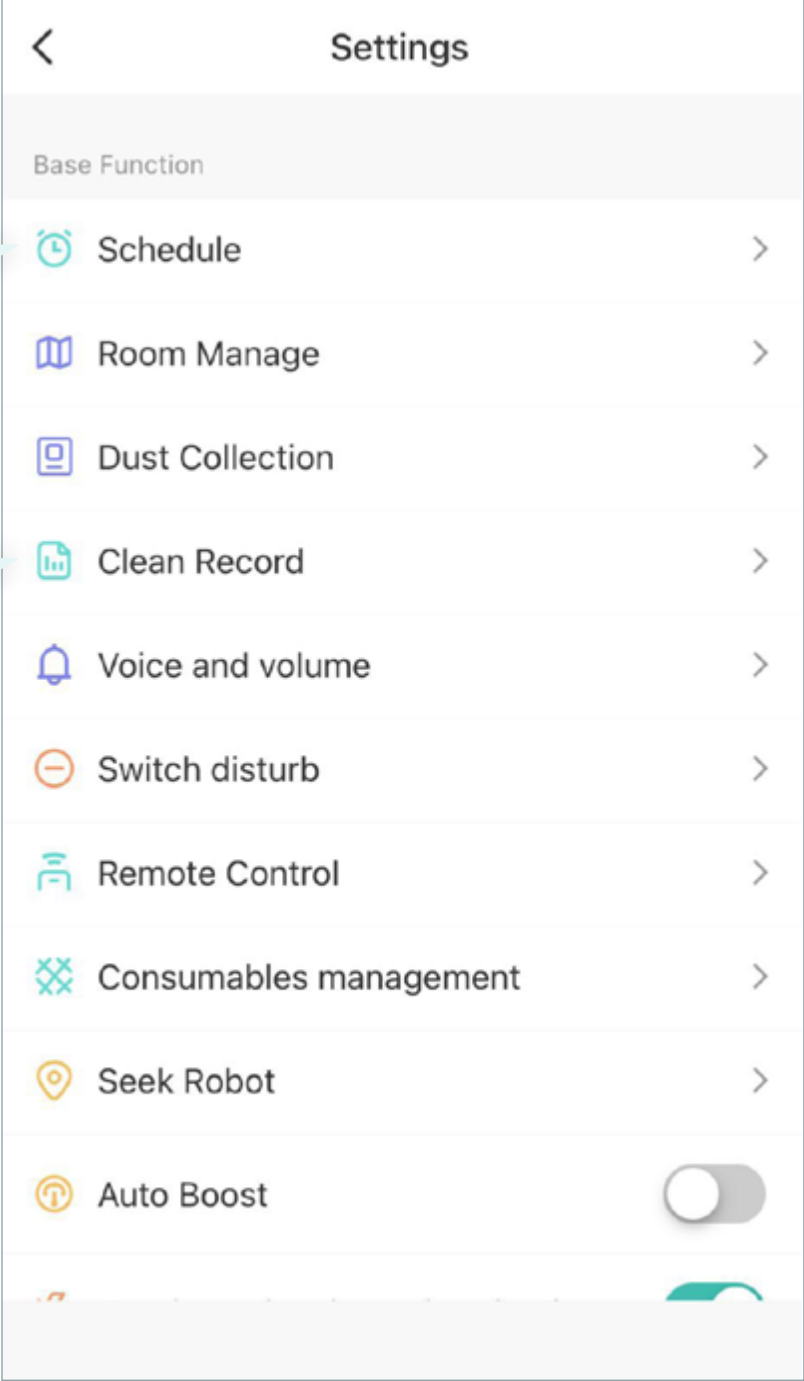

If you want to clean selected rooms at the specified time and day select here. Mark which rooms you want to clean in a set way.

DETAILED SETUP >>

Set up scheduled cleaning.

Overview and information about completed cleanings.

By activating the function, the robot will automatically increase the suction force after detecting the carpet.

Special modes cleaning. Cleaning starts immediately after activation.
